SOUTHERN AFRICAN INSTITUTE OF STEEL CONSTRUCTION

MEETSE-A-BOPHELO SCHOOL MAMELODI PRETORIA

When the biggest steel maker in the country, Arcelor Mittal, decides to involve itself with building of a school and donating it to the community, "steel" is sure to fly.

Realizing that this was an opportunity to show of Arcelor Mittal international companies products, the Arval steel and insulation sandwich panel side wall cladding was imported from their sister company in France.

Other local cladding products were used for the roof. Internal walls were from light steel framed panels.

Perhaps the way of the future for schools? Cost effective, comfortable from a heating/ cooling point of view and sound proof together with quality, quality and more quality.
